

# Geography Knowledge Building

Understand the importance of forest monitoring using field and aerial surveys, and satellite imagery	Know that the Mayan people used to live in the rainforest and historic human features remain as evidence	Know and understand the features of the different layers of the canopy	Know and understand the process of deforestation and its effects globally	Understand how and why the location of tropical rainforests impacts on biodiversity	Know that places located on the equator tend to have a hot, wet and humid climate
Know about and give examples of evidence of animal species loss in the Amazon rainforest	Know that there are few human features within the rainforest and give reasons for this	Know and describe some physical features of the rainforest	Know and understand the terms 'tropical' and 'equatorial'	Know that because tropical rainforests are located near the equator this impacts on climate	Know that there are no seasons at the equator and every day of the year has 12 hours of sunlight
<b>Know that both primary and secondary sources of evidence show process and change</b>	<b>Know and describe some human geographical features in the wider world</b>	<b>Know and describe some physical geographical features in the wider world</b>	<b>Know and understand key vocabulary related to geographical processes</b>	<b>Know and understand the interrelationship between location and environment</b>	<b>Understand how and why some places and features are similar or different, giving reasons</b>
<b>Processes and Changes</b>	<b>Human Geography</b>	<b>Physical Geography</b>	<b>Geographical Vocabulary</b>	<b>Locations and Environments</b>	<b>Similarities and Differences</b>

## Under the Canopy
